

Lecture 09-10: Chapter 1 Review & Sets

Jingjin Yu | Computer Science @ Rutgers

RUTGERS
THE STATE UNIVERSITY
OF NEW JERSEY

October 02, 2020

Outline

Copyrighted Material – Do Not Distribute

- ▶ Lectures 07-08 review
- ▶ Chapter 1 review
 - ▷ Logic & proofs
 - ▷ Definitions, axioms, theorems
 - ▷ Propositional logic: syntax & semantics
 - ▷ Extension to predicate logic
 - ▷ Rules of inference
 - ▷ Informal proofs & proof strategies
- ▶ Sets [2.1-2.2]

- ▶ A repeating note: **make sure you read the textbook**

L07-08: What was Covered

Copyrighted Material – Do Not Distribute

- ▶ Exhaustive proofs
 - ▷ Exclusive enumeration ←
 - ▷ Non-exclusive cases ←
- ▶ Existence proofs
 - ▷ Providing an example ←
 - ▷ Proving existence without an example ←
- ▶ Uniqueness proof
- ▶ Strategies
 - ▷ Reasoning backwards ←
 - ▷ Adapting existing proofs ←
 - ▷ Finding counterexamples

L07-08: Exhaustive Proof

Copyrighted Material – Do Not Distribute

- ▶ **Ex:** You have a drawer filled with red or blue socks. Show that if you pick three socks, you will have a pair of socks of the same color.
- ▶ **Ex:** Show that $((x > 4) \vee (y > 2)) \rightarrow (|x| + y^2 > 4)$.

L07-08: Existence Proof

Copyrighted Material – Do Not Distribute

- ▶ **Ex:** Show that there are positive integers that can be written as the sum of cubes of integers in two different ways.
- ▶ **Ex:** Prove the existence of irrational numbers x and y such that x^y is rational.

L07-08: Uniqueness & Proof Strategies

Copyrighted Material – Do Not Distribute

- ▶ Uniqueness proofs: $\exists x (P(x) \wedge \forall y ((y \neq x) \rightarrow \neg P(y)))$
- ▶ Strategies
 - ▷ Reasoning backwards: stone removal
 - ▷ Adapting existing proofs
 - ❑ **Ex:** Show that $\sqrt{3}$ is irrational.
 - ❑ (Generalization) If p is prime, then \sqrt{p} is irrational.
 - ❑ (Further generalization) If n is not a perfect square, then \sqrt{n} is irrational.

CH01: Logic and Proofs

Copyrighted Material – Do Not Distribute

- ▶ Whenever we talk about proofs, we need to specify a logic
 - ▷ Syntax: how to form sentences (definitions, axioms, propositions)
 - ▷ Semantics: how to interpret meaning and reason (with rules of inference)

Logic (Syntax and Semantics)

Proof

Premises A_1, A_2, \dots

Rules of Inference

Conclusion P

- ▶ Chapter 1 covered:
 - ▷ Propositional logic
 - ▷ Predicate logic
 - ▷ Rules of inference, formal
 - ▷ Informal proofs, methods and strategies

CH01: Definitions, Axioms, Theorems

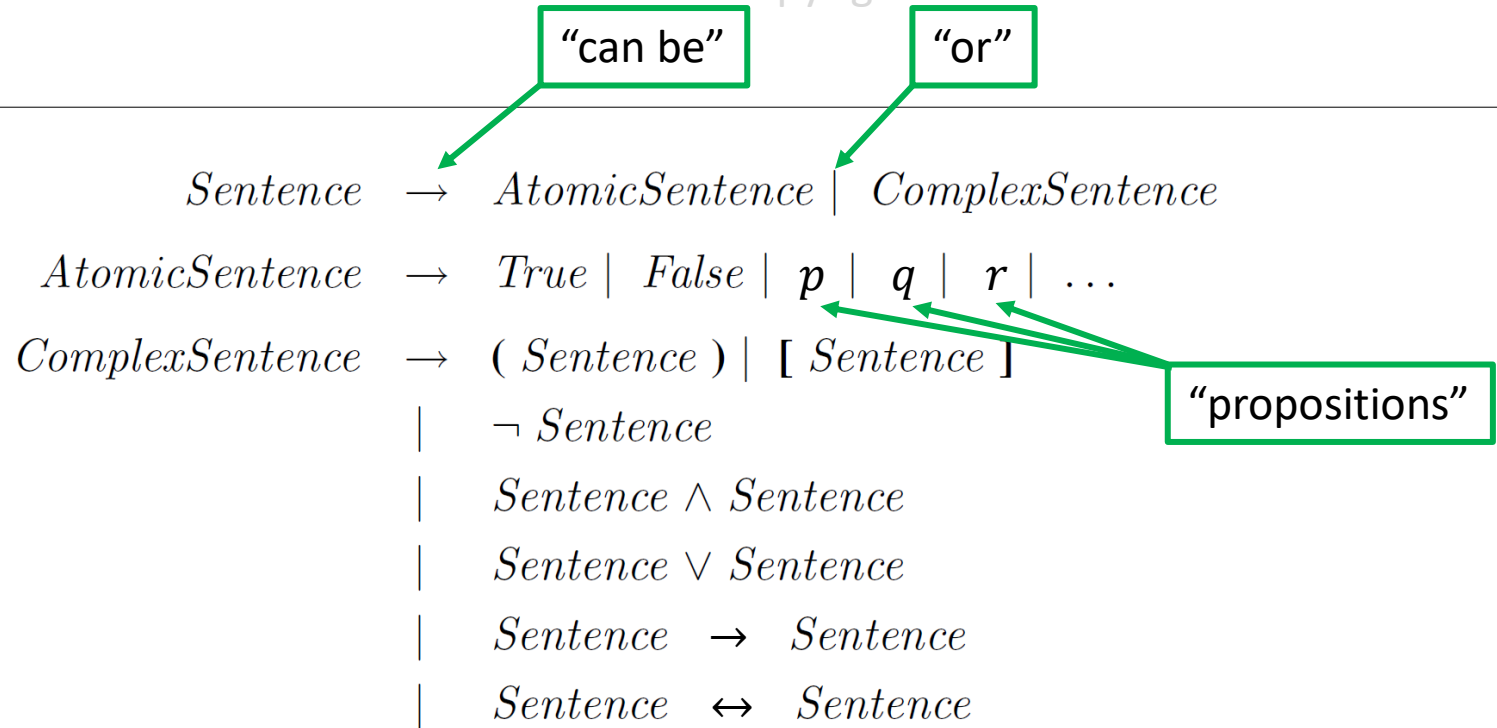

Copyrighted Material – Do Not Distribute

- ▶ We work mostly with definition and theorems
 - ▷ A definition defines what an entity is
 - ▷ A theorem relates different definitions
- ▶ Axiom: a proposition that is assumed to be true
- ▶ Theorems have many “variants”
 - ▷ Observation: an obvious (provable) statement
 - ▷ Theorem: a reasonably important result
 - ▷ Lemma: intermediate theorems for proving a concluding result
 - ▷ Proposition: a standalone, not very important theorem
 - ▷ Corollary: a derivative result that is worth stating and follows other theorems
 - Theorem: the sum of internal angles of a non-self-intersecting n -gon is $(n - 2) * 180$
 - Corollary: the sum of the internal angles of a triangle is 180.
 - ◆ A derivative but very useful result worth knowing

CH01: Propositional Logic: the Syntax

Copyrighted Material – Do Not Distribute

- ▶ A sentence(proposition) can be an atomic sentence or a complex sentence
- ▶ E.g. $(p \vee q) \rightarrow (r \vee s)$
 - ▷ Propositions p, q, r, s are atomic sentences
 - ▷ $(p \vee q)$ is a complex sentence
 - ▷ So are $(r \vee s)$ and $(p \vee q) \rightarrow (r \vee s)$

CH01: Propositional Logic Semantics

Copyrighted Material – Do Not Distribute

► Truth table

p	q	$\neg p$	$p \wedge q$	$p \vee q$	$p \rightarrow q$	$p \leftrightarrow q$	converse $\neg p \rightarrow \neg q$	inverse $q \rightarrow p$	contrapositive $\neg q \rightarrow \neg p$
T	T	F	T	T	T	T	T	T	T
T	F	F	F	T	F	F	T	T	F
F	T	T	F	T	T	F	F	F	T
F	F	T	F	F	T	T	T	T	T

► A note on $p \rightarrow q$

▷ Many equivalent statements

p implies q	q is necessary for p
If (when) p , (then) q	q follows p
p is sufficient for q	q if (when) p
p only if q	...

▷ E.g., “You can graduate only if you have 150 credits”

- ❑ If you graduated, then you must already have 150 credits
- ❑ 150 credits is **necessary** for graduation (but may not be sufficient, e.g., maybe you decide to use the credit toward degree at another school)
- ❑ Graduation **sufficiently** implies that you have at least 150 credits

CH01: Propositional Logic Semantics Cont.

Copyrighted Material – Do Not Distribute

Name	Equivalence
Identity laws	$p \wedge T \equiv p,$ $p \vee F \equiv p$
Domination laws	$p \vee T \equiv T,$ $p \wedge F \equiv F$
Idempotent laws	$p \vee p \equiv p,$ $p \wedge p \equiv p$
Double negation law	$\neg(\neg p) \equiv p$
Commutative laws	$p \vee q \equiv q \vee p,$ $p \wedge q \equiv q \wedge p$
Associative laws	$(p \vee q) \vee r \equiv p \vee (q \vee r),$ $(p \wedge q) \wedge r \equiv p \wedge (q \wedge r)$
Distributive laws	$p \vee (q \wedge r) \equiv (p \vee q) \wedge (p \vee r)$ $p \wedge (q \vee r) \equiv (p \wedge q) \vee (p \wedge r)$
De Morgan's laws	$\neg(p \vee q) \equiv \neg p \wedge \neg q,$ $\neg(p \wedge q) \equiv \neg p \vee \neg q$
Absorption laws	$p \vee (p \wedge q) \equiv p,$ $p \wedge (p \vee q) \equiv p$
Negation laws	$p \vee \neg p \equiv T,$ $p \wedge \neg p \equiv F$

Equivalence Containing Conditionals
$p \rightarrow q \equiv \neg p \vee q$
$p \rightarrow q \equiv \neg q \rightarrow \neg p$
$p \vee q \equiv \neg p \rightarrow q$
$p \wedge q \equiv \neg(p \rightarrow \neg q)$
$\neg(p \rightarrow q) \equiv p \wedge \neg q$
$(p \rightarrow q) \wedge (p \rightarrow r) \equiv p \rightarrow (q \wedge r)$
$(p \rightarrow r) \wedge (q \rightarrow r) \equiv (p \vee q) \rightarrow r$
$(p \rightarrow q) \vee (p \rightarrow r) \equiv p \rightarrow (q \vee r)$
$(p \rightarrow r) \vee (q \rightarrow r) \equiv (p \wedge q) \rightarrow r$

Equivalence Containing Bidirectionals
$p \leftrightarrow q \equiv (p \rightarrow q) \wedge (q \rightarrow p)$
$p \leftrightarrow q \equiv \neg p \leftrightarrow \neg q$
$p \leftrightarrow q \equiv (p \wedge q) \vee (\neg p \wedge \neg q)$
$\neg(p \leftrightarrow q) \equiv p \leftrightarrow \neg q$

CH01: Extension to Predicate Logic

Copyrighted Material – Do Not Distribute

- ▶ Predicate: a property that objects may or may not satisfy
 - ▷ E.g. $StarTrekFan(x)$: whether student x is a Star Trek fan
 - ▷ Can be viewed as a partial proposition
 - ▷ Possible to have multiple variables: $Larger(x, y) = (x > y)$
- ▶ Quantifiers
 - ▷ Universal: $\forall x P(x)$, $P(x)$ is true for all x
 - ▷ Existential: $\exists x P(x)$, $P(x)$ is true for at least one x
 - ▷ Note that in general, $\exists x \forall y P(x, y) \neq \forall y \exists x P(x, y)$
- ▶ Binding: a variable is bound in a predicate when a quantifier of that variable is applied to the predicate, e.g. $\forall x \exists y (P(x, y) \vee Q(y))$
 - ▷ If all variables are bound, then the statement must be either true or false
- ▶ Negation: $\neg(\forall x P(x)) = \exists x(\neg P(x))$, $\neg(\exists x P(x)) = \forall x(\neg P(x))$.
 - ▷ Recursive application for multiple quantifiers
 - ▷ $\neg \forall x \exists y (P(x, y) \vee Q(y)) = \exists x \forall y (\neg P(x, y) \wedge \neg Q(y))$

CH01: Rules of Inference

Copyrighted Material – Do Not Distribute

► Propositional

▷ Modus ponens

$p \rightarrow q$
p

q

▷ Modus tollens

$p \rightarrow q$
$\neg q$

$\neg p$

Rule	Tautology	Name
$\frac{p \rightarrow q \quad q \rightarrow r}{p \rightarrow r}$	$((p \rightarrow q) \wedge (q \rightarrow r)) \rightarrow (p \rightarrow r)$	Hypothetical syllogism
$\frac{p \vee q \quad \neg p}{q}$	$((p \vee q) \wedge \neg p) \rightarrow q$	Disjunctive syllogism
$\frac{p}{p \vee q}$	$p \rightarrow (p \vee q)$	Addition
$\frac{p \wedge q}{p}$	$(p \wedge q) \rightarrow p$	Simplification
$\frac{p \quad q}{p \wedge q}$	$((p) \wedge (q)) \rightarrow (p \wedge q)$	Conjunction
$\frac{p \vee q \quad \neg p \vee r}{q \vee r}$	$((p \vee q) \wedge (\neg p \vee r)) \rightarrow (q \vee r)$	Resolution

► With quantifiers

- ⇒ Universal instantiation: $\forall xP(x) \rightarrow P(c)$ for any c
- ⇒ Existential instantiation: $\exists xP(x) \rightarrow P(c)$ for at least one c
- ⇒ Universal generalization: $P(c)$ for arbitrary $c \rightarrow \forall xP(x)$
- ⇒ Existential generalization: $P(c) \rightarrow \exists xP(x)$

CH01: 1.6 Exercise 28

Copyrighted Material – Do Not Distribute

- ▶ If $\forall x(P(x) \vee Q(x))$ and $\forall x((\neg P(x) \wedge Q(x)) \rightarrow R(x))$ are true, then $\forall x(\neg R(x) \rightarrow P(x))$ is also true.

CH01: Informal Proofs

Copyrighted Material – Do Not Distribute

► How to approach proofs?

- ▷ Requires creativity in general, but there are some rules to follow
- ▷ First, pick how you will attack
 - ❑ Direct proof: prove $(p \rightarrow q) = T$ by assuming $p=T$ and derive $q=T$
 - ❑ Proving contrapositive: prove $p \rightarrow q$ by proving $\neg q \rightarrow \neg p$
 - ❑ Proof via contradiction: to prove $p=T$, assume $\neg p$ and derive a contradiction
- ▷ Next, examine the scope
 - ❑ Exhaustive proof must show $\forall xP(x)$
 - ❑ Existence proof only needs to establish $\exists xP(x)$
 - ◆ Can be constructive or non-constructive
 - ❑ Uniqueness proof requires showing $\exists!xP(x)$
- ▷ Then, try to get the details
 - ❑ Working from the start and/or from the goal – try to connect
 - ❑ Adapting or generalizing existing proofs
 - ◆ This means that one may look at some simple cases first

Sets

Copyrighted Material – Do Not Distribute

- ▶ **Defⁿ**: A **set** is an unordered collection of objects (or elements, members).
- ▶ Membership: $a \in A, b \notin A$
- ▶ Roster representation
 - ▷ **Ex**: The set of all vowels: $V = \{a, e, i, o, u\}$.
 - ▷ **Ex**: The set of positive odd integers less than 10: $O = \{1, 3, 5, 7, 9\}$.
 - ▷ **Ex**: Elements do not need to be of the same type: $A = \{1, 3.4, \textit{ball}, \textit{tree}\}$.
 - ▷ **Ex**: The set of natural numbers: $N = \{0, 1, 2, \dots\}$.
 - ▣ A word about the number 0...
- ▶ Frequently seen sets: $\mathbb{N}, \mathbb{Z}, \mathbb{Q}, \mathbb{R}, \mathbb{C}$.

Builder Notation, Equivalence, Empty Set

Copyrighted Material – Do Not Distribute

- ▶ Set builder notation: $A = \{x \mid \text{property satisfied by } x\}$
 - ▷ **Ex:** $O = \{x \mid (0 \leq x \leq 10) \wedge (x \text{ is odd})\}$.
 - ▷ **Ex:** Intervals on a line:
 - $(a, b) = \{x \mid a < x < b\}$
 - $(a, b] = \{x \mid a < x \leq b\}$
 - $[a, b) = \{x \mid a \leq x < b\}$
 - $[a, b] = \{x \mid a \leq x \leq b\}$
 - ▷ **Ex:** $A = \{x \mid x \text{ is a student at Rutgers}\}$
- ▶ **Defⁿ:** Two sets A and B are equal if they contains the same elements.
 - ▷ Equivalently, $A = B$ if and only if $\forall x(x \in A \leftrightarrow x \in B)$.
- ▶ The empty set: $\emptyset = \{\}$, the set that contains zero elements.
 - ▷ Note: $\{\emptyset\} \neq \emptyset = \{\}$
 - ▷ $\{\emptyset\}$ is a set with one element, which is the empty set (as an element)

Subsets

Copyrighted Material – Do Not Distribute

- ▶ **Defⁿ:** A is a subset (\subseteq) of B if every element of A is also an element of B .
- ▶ **Ex:** $\mathbb{N} \subseteq \mathbb{Z} \subseteq \mathbb{R} \subseteq \mathbb{C}$.
- ▶ **Ex:** $A = \{1, 3, 5, \dots\}$, $A \subseteq \mathbb{N}$
- ▶ **Ex:** $A = \{\text{CS 205 students}\}$, $B = \{\text{Rutgers students}\}$, $A \subseteq B$
- ▶ Equivalently, $A \subseteq B$ if and only if $\forall x(x \in A \rightarrow x \in B)$.
 - ▷ The symbols \subset and \subseteq generally bear the same meaning.
 - ▷ For **proper** subset, we generally use $A \subsetneq B$
 - ▣ **Ex:** $\mathbb{Z} \subsetneq \mathbb{R}$
 - ▣ Note that it is possible that $A \subsetneq B$ and $A \subseteq B$ both hold
- ▶ To prove $A \subseteq B$, can show $c \in A \rightarrow c \in B$ for arbitrary $c \in A$.
- ▶ To prove $A \subsetneq B$, show $A \subseteq B$ and there is a c s.t. $c \in B$ and $c \notin A$.
- ▶ To prove $A = B$, show $A \subseteq B$ and $B \subseteq A$.
- ▶ **Fact:** for every set S , $\emptyset \subseteq S$ and $S \subseteq S$.

Cardinality (Size) of Sets

Copyrighted Material – Do Not Distribute

- ▶ **Defⁿ:** For a set S , if there are exactly n distinct elements in S for some positive integer n , then S is a **finite set** of **cardinality** n , denoted $|S| = n$. A set is **infinite** if it is not finite.
 - ▷ **Ex:** $|\{1, 3, 5\}| = 3$
 - ▷ **Ex:** $|\text{English alphabet}| = 26$
 - ▷ **Ex:** $|\emptyset| = 0$
 - ▷ **Ex:** $|\{\emptyset\}| = 1$

- ▶ Infinite sets have interesting structures on cardinality
 - ▷ Size of the set of integers?
 - ▷ What about odd numbers?
 - ▷ Real numbers?
 - ▷ Need “functions” to make this more precise
 - ▷ Infinity is weird (and may or may not be real at all!)

Power Set

Copyrighted Material – Do Not Distribute

- ▶ **Defⁿ:** The power set of a set S is the set of all subsets of S , denoted $P(S)$
 - ▷ **Ex:** $P(\{1, 2\}) = ?$
 - ▷ **Ex:** $P(\emptyset) = ?$
 - ▷ **Ex:** $P(P(\emptyset)) = ?$
 - ▷ For a finite set S , $|P(S)| = 2^{|S|}$

Cartesian Products

Copyrighted Material – Do Not Distribute

- ▶ **Defⁿ:** The ordered n -tuple (a_1, \dots, a_n) is the ordered collection with a_i being the i -th element.
- ▶ **Defⁿ:** The Cartesian product of the sets A_1, \dots, A_n , is the set

$$A_1 \times \dots \times A_n = \{(a_1, \dots, a_n) \mid a_i \in A_i \text{ for } 1 \leq i \leq n\}.$$

- ▶ **Ex:** $A = \{1, 2\}, B = \{2, 3\}$. What is $A \times B$?
- ▶ Note that $|A_1 \times \dots \times A_n| = |A_1| \times \dots \times |A_n|$
- ▶ Can be infinite, e.g., the x - y coordinate system

Potential Issues with “Naïve” Set Theory

Copyrighted Material – Do Not Distribute

- ▶ Consider $A = \{x \mid x \notin x\}$.
 - ▷ That is, set A contains elements that are sets which do not contain themselves.
 - ▷ Question: $A \in A$?

Set Operations

Copyrighted Material – Do Not Distribute

- ▶ Let U be the “universe”
 - ▷ Union: $A \cup B = \{x \mid x \in A \vee x \in B\}$
 - ▷ Intersection: $A \cap B = \{x \mid x \in A \wedge x \in B\}$
 - ▷ A and B are disjoint if $A \cap B = \emptyset$
 - ▷ Difference: $A \setminus B = A - B = \{x \mid x \in A \wedge x \notin B\}$
 - ▷ Complement: $\bar{A} = U - A = \{x \in U \mid x \notin A\}$
 - ▷ Symmetric difference: $A \oplus B = (A \cup B) - (A \cap B)$

Set Operations, Cont.

Copyrighted Material – Do Not Distribute

► **Ex:** $U = \{1, \dots, 10\}$, $A = \{2, 3, 6, 8, 9\}$, $B = \{3, 4, 8, 10\}$

Set Identities

- ▶ Set identities are somewhat like logical operations
- ▶ **Ex:** $\overline{A \cap B} = \bar{A} \cup \bar{B}$

Copyrighted Material – Do Not Distribute

TABLE 1 Set Identities.

<i>Identity</i>	<i>Name</i>
$A \cap U = A$ $A \cup \emptyset = A$	Identity laws
$A \cup U = U$ $A \cap \emptyset = \emptyset$	Domination laws
$A \cup A = A$ $A \cap A = A$	Idempotent laws
$\overline{(\bar{A})} = A$	Complementation law
$A \cup B = B \cup A$ $A \cap B = B \cap A$	Commutative laws
$A \cup (B \cap C) = (A \cup B) \cap (A \cup C)$ $A \cap (B \cup C) = (A \cap B) \cup (A \cap C)$	Distributive laws
$\overline{A \cap B} = \bar{A} \cup \bar{B}$ $\overline{A \cup B} = \bar{A} \cap \bar{B}$	De Morgan's laws
$A \cup (A \cap B) = A$ $A \cap (A \cup B) = A$	Absorption laws
$A \cup \bar{A} = U$ $A \cap \bar{A} = \emptyset$	Complement laws

Set Identities, Cont.

Copyrighted Material – Do Not Distribute

► **Ex:** $A \cap (B \cup C) = (A \cap B) \cup (A \cap C)$

Set Identities: Proof using Identities

Copyrighted Material – Do Not Distribute

► **Ex:** $\overline{A \cup (B \cap C)} = \bar{A} \cap (\bar{B} \cup \bar{C})$
